Carbon Tax Removal Substantiation Notice

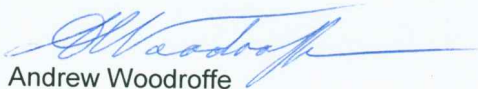

Mt Barker Power Co owns and operates the Mt Barker Community Windfarm and as such has NO carbon emission liability.

(i) a. The plant being a windfarm has NO regulated supply inputs. The repeal of the carbon tax therefore does not result in any savings. The repeal of the carbon tax does however reduce the competitiveness of the windfarm with relation to fossil fuel based electricity generators who now longer pay anything for their carbon emissions.

b. see a. As there are no carbon emissions in the generation of electricity by the power of the wind, no additional charges occurred based on the introduction of the carbon tax, and no reductions result from the repeal of the carbon tax.

(ii) The Mt Barker Community windfarm generates renewable energy from wind and does not use any carbon based fuel, indeed, any fuel, in its operation.

(iii) See attached photo
